TetraPond MediFin®

Pharmaceutically effective component: Agent solution for addition to pond water. Original packages contain 250 ml.

Pharmaceutically effective components per 100 ml:

Malachite green oxalate	67.0 mg
Formaldehyde	7.50 g

Method of application: Skin parasites such as Ichthyophthirius multifiliis, Costia, Chilodonella, Trichodina, fungal diseases, bacterial skin infections, fin rot. TetraPond MediFin helps treat wounds and all kinds of external injuries.

Contraindications and side effects: Not known. The owner is requested to inform a veterinary surgeon or pharmacist of any previously unknown side effects. The specialist dealer or manufacturer should also be informed of the side effects.

Medication for garden pond fish.

Dosage/Application: 1. Shake the bottle well prior to use 2. Unless otherwise prescribed, add 50 ml of MediFin per 1,000 litres of garden pond water using the dosage cup and distribute evenly.

Information for correct use: During treatment do not filter using UV clarifiers, synthetic resin or active coal • Treatment last 4-7 days, beginning with a single dosage on day 1. The medication is effective over the following days • If possible, filter through active coal after each treatment. The filter should not be heavily soiled, additional ventilation is recommended. After filtering, a further dosage can be applied.

- At least two consecutive treatments are recommended in the case of white spot disease and if water temperatures are low
- Treatment is also recommended as a preventive measure, in particular after hibernation and when new fish are added to the pond.

TetraPond MediFin contains a highly active combination of active agents that guarantees the broad treatment of a wide variety of fish diseases. TetraPond MediFin combats bacterial and parasitic pathogens and reliably disinfects the garden pond water. It is important that the treatment takes place as quickly as possible so that when treatment commences the badly affected fish still have sufficient strength to recuperate.

Do not use TetraPond MediFin in combination with other medications. Combined use with other TetraPond products is possible.

Special precautionary steps for storage: Protect from sunlight! Do not store at temperatures of over 25°C!

Special warning: Medication for animals. Do not give to animals that are used in the manufacture of food! Keep medication out of reach of children! Do not use medication after the expiry date!
