

Voyager 2-3-4

Power Stream

Maximum inclination

Due to its' support, it is able to reach the widest angulations: up to 180 degrees vertically, and 360 degrees circularly, with endless orientation

Maximum flexibility for a 360° positioning

Thanks to the exclusive magnetic support, it can be positioned anywhere: on the sides, behind, and also to the corners of an aquarium. Voyager's versatility in movement and positioning makes it possible to hide anywhere, always assuring optimal performances.

Maximum flexibility for a flow as your corals need

The rotation of the front ring nut allows to regulate the flow, recreating faithfully the effect of marine currents and satisfying even the most particular of your coral's needs.

Maximum quietness

Manufactured with the most durable rotor and shaft! The unique bidirectional design of the rotor assures that the pump always starts in the correct sense, avoiding the annoying noises provoked by an inversion of sense of circulation.

Maximum reliability

Rotor and shaft are wear-resistant beyond compare! Long lasting magnetic support. The suction cups applied in a saltwater tank become stiff with time, compromising their hold and causing the pump to become instable. The exclusive magnetic support is ideal for glasses of 15 mm of width.

Maximum safety for your fishes

No dangers for your fish: Voyager is equipped with a grill that prevents even the smallest fish of ever coming in contact with the moving rotor.
